

Graph Selection

Team AMS allows you to graphically select portions of a player's session for closer investigation. You can view summary information about each selected portion or use them to split the sessions into drills. You can also use this feature to apply a single set of drills to all sessions of the same name.

To make a selection, click and drag your mouse near the bottom of the graph. The duration of your selection will appear next to the mouse cursor and the selected region will

be indicated by a black outline. When you've finished making the selection, summary information about it will appear beneath the graph. Multiple selections can be made, in which case totals will appear at the bottom of the summary information.

Modifying Selections

You can change the start and end time of a selection in three ways:

- Select an overlapping region. The program will then merge these two selections into one.
- Type in a new start or end time in the table of summary information
- When you select the start or end time fields in the table of summary information, up and down arrows will appear. Highlight the hour, minute or second and use the arrow buttons to change it. The changes will be reflected on the graph as you make them.

To clear a selection, right-click inside it and choose “clear” from the popup menu, or “clear-all” to remove all selections.

Selections will automatically be cleared when you change to another session or when you reset the zoom-level on the current graph.

Making Splits from Selections

To create a split based on a single selection, choose “split” from the popup menu; to create splits based on all selections choose “split all”; and to create splits based on all selections and apply them to every session with the same name as the current one, choose “split for every ...”
